

The LWA Unit Functions

The left hand LED is **Amber** and indicates mobile phone network connectivity.

The Left hand button (Call button # 2) is used as a quick speed dial function for easy 2-way communications with the "Non Emergency" side of the call centre, where important information such as

- Car registration,
- Flat number you are visiting
- Time you intend to return etc.....

This information is recorded for future reference.

Simply push the middle button, below the red light to hang up the call when finished.
